

automatically switched to display the file. A Web browser of another client terminal collaborating with this client terminal is also switched to display the file.

IN THE CLAIMS:

Please amend the claims to read as follows:

1. A method of communicating on a communication system having a client terminal connecting a server through a network and collaborating with other client terminals connected to said network, said method comprising the steps of:

- (a) generating an image file in response to specifying an image area by an operator of said client terminal;
- (b) acquiring an image file name from said server;
- (c) converting said image file to generate a predetermined formed compressed image data which has a file name relating to said image file name;
- (d) sending said predetermined formed compressed image data to said server;
- (e) displaying said predetermined formed compressed image data of said server on a Web browser on said client terminal; and
- (f) posting the file name of said predetermined formed compressed image data to the client terminals collaborating with said client terminal.

2. A method of communicating on a communication system having a client terminal connecting a server through a network, said method comprising the steps of:

- (a) generating an image file in response to specifying image data by a operator of said client terminal;
- (b) determining a unique image file name on said server;
- (c) converting said image file to generate a predetermined formed compresses image data which has a file relating to said unique image file name;
- (d) sending said predetermined formed compressed image data to said server; and
- (d) displaying said predetermined formed compressed image data of said server on a Web browser on said client terminal.

3. A method of communication on a communication system having a client terminal connecting a server through a network, said method comprising the steps of:

- (a) generating an image file in response to specifying image data by an operator of said client terminal;
- (b) converting said image file to generate a predetermined formed compressed image data;
- (c) sending said predetermined formed compressed image data to said server;
- (d) determining a unique image file name on said server and posting it to said client terminal; and
- (e) displaying said predetermined formed compressed image data of said server on a Web browser on said client terminal.

4. A method of communicating on a communication system having a client terminal connecting with a network and a server connecting with said network and storing a file created by an operator of said client terminal which has a name capable of determining that it was created by said operator, said method comprising the steps of:

- (a) receiving a message sent from said client terminal including information capable of identifying said operator;
- (b) acquiring the information capable of identifying said operator included in said message;
- (c) acquiring the file name of the file created by said operator based on said information capable of identifying said operator;
- (d) generating a file list file by inserting said file name into a skeleton file; and
- (e) posting the file name of said file list file to said client terminal.

5. A client terminal connecting a server through a network and collaborating with other client terminals connected to said network, said client terminal comprising:

- (a) a screen range selector for specifying a screen range in response to operation for specifying screen range by an operator;
- (b) an image file generator for acquiring an image according to said screen range and generating an image file;

- (c) a file acquisition for acquiring an original name from said server;
 - (d) an image file converter for converting said image file to generate a predetermined formed compressed image data;
 - (e) a file transmitter for sending to said server said predetermined formed compressed image data which has a file name relating to said original name; and
 - (f) a display division for displaying said predetermined formed compressed image data of said server on a Web browser on said client terminal.
6. A server connecting a client terminal through a network and storing a file created by an operator of said client terminal which has a file name capable of determining that it was created by said operator, said server comprising:
- (a) a message analysis division for receiving a message sent from said client terminal including information capable of identifying said operator and acquiring said information; and
 - (b) a file list generator for acquiring the file name of the file created by said operator based on said information, generating a file list by inserting said file name into a skeleton file; and posting the file name of said file list file to said client terminal.
7. A communication system having a first and a second client terminal connecting with a network and a server connecting said first and a second terminal through said network, said communication system comprising:
- the first client terminal comprising:
- (a1) an image file generator for, in response to operation for specifying a screen range by an operator, generating an image file according to said operation;
 - (a2) a file name acquisition division for acquiring an original name from said server;
 - (a3) an image file converter for converting said image file to generate a predetermined formed compressed image data;
 - (a4) a file transmitter for sending to said server said predetermined formed compressed image data which has a file name relating to said original name; and

- (a5) a display division for displaying said predetermined formed compressed image data of said server on a Web browser on said first client terminal and posting the name of said predetermined formed compressed image data to said second client terminal, and
- (b) a server comprising a file name generator for generating an original name capable of uniquely identifying said first client terminal in response to a request from said first client terminal and posting it to said first client terminal; and
- (c) a second client terminal for displaying said predetermined formed compressed image data of said server on a Web browser on said second client terminal based on the name of said predetermined formed compressed image data sent from said first client terminal.

8. A storage medium storing a software product for connecting a server through a network and controlling communication performed on a communication system having a client terminal collaborating with other client terminals connected to said network, said software product comprising the program codes for:

- (a) directing said client terminal to generate an image file in response to specifying an image area by an operator of said client terminal;
- (b) directing said client terminal to acquire an image file name from said server;
- (c) directing said client terminal to convert said image file and generate a predetermined formed compressed image data which has a file name relating to said image file name acquired from said server;
- (d) directing said client terminal to send predetermined formed compressed image data to said server;
- (e) directing said client terminal to display said predetermined formed compressed image data of said server on a Web browser on said client terminal; and
- (f) directing said client terminal to post the file name of said predetermined formed compressed image data to the client terminals collaborating with said client terminal.

9. A storage medium storing a software product for controlling communication performed on a communication system having a client terminal connecting a server through a network, said software product comprising the program codes for:

- (a) directing said client terminal to generate an image file in response to specifying image data by an operator of said client terminal;
- (b) directing said client terminal to determine a unique image file name on said server;
- (c) directing said client terminal to convert said image file and generate a predetermined formed compressed image data which has a file name relating to said image file name acquired from said server;
- (d) directing said client terminal to send said predetermined formed compressed image data to said server; and
- (e) directing said client terminal to display said predetermined formed compressed image data of said server on a Web browser on said client terminal.

- [Handwritten signature or mark over the list]*
10. (amended) A storage medium storing a software product for controlling communication performed on a communication system having a client terminal connecting a server through a network, said software product comprising the program codes for:
- (a) directing said client terminal to generate an image file in response to specifying image data by an operator of said client terminal;
- (b) directing said client terminal to convert said image file and generate a predetermined formed compressed image data;
- (c) directing said client terminal to send said predetermined formed compressed image data to said server;
- (d) directing said client terminal to determine a unique image file name on said server and post it to said client terminal; and
- (e) directing said client terminal to display said predetermined formed compressed image data of said server on a Web browser on said client terminal.

11. A storage medium storing a software product for controlling communication performed on a communication system having a client terminal connecting with a network and a server connecting with said network and storing a file created by an operator of said client terminal which has a file name capable of determining that it was created by said operator, said software product comprising the program codes for:
